

PRODUCT DATA SHEET.

Prover Lubricant

Prover Lubricant is a long established lubricant for use on Bakery Prover Ovens. **Bread Provers are used prior the final baking.** It helps bakeries and patisseries improve the fermentation process.

Prover Lubricant can also be used in to assist in Baking ovens if the normal lubricant is not available. At high temperatures, when the carrier may vaporize off, the solid film of graphite will continue to supply lubrication.

General Product Description

Prover Lubricant is manufactured from highly refined Base Oils and consists of saturated paraffinic and cycloparaffinic hydrocarbons containing very small particle size micronized Graphite. The graphite provides excellent lubricating properties at normal operating temperatures of bakery ovens.

Product must be stirred prior to and regularly during application.

Typical Uses.

Prover Ovens

Typical Chemical Analysis.

Colour. Black.

Odour. Mineral oil.

Flash Point. >230C

Container. 20 L

Applied with brush, spray or drip feed.
