

PRODUCT DATA SHEET. FJ9220 OVEN CHAIN LUBRICANT

General Product Description

FJ9220 Oven Chain Lubricant is a specially developed Non-Toxic, water-based oven chain lubricant for use in food and industrial type ovens.

FJ9220 can be diluted up to 3 times with tap water and agitated with an electric drill. The solids in the mixture will stay in suspension giving a consistent mixture that can be applied to the chain. If the diluted mixture is left overnight or longer, slight agitation will be required to ensure re-dispersion of the mix

Typical Uses.

Lubricating Oven chains.

Application:

FJ 9220 has been developed for bakeries that have down time from baking and can therefore lubricate a warm chain. **FJ9220** should be applied to the moving chain at no more than 90C

There is no hard, difficult to remove coating left behind like that found when mineral oil based lubricants are used. Fumes are greatly reduced.

FJ9220 is used successfully by many Australian Bread Manufacturers.

Packing.

20 kg pails
